DVBLogic launches DVBLink 5.1 and TV Adviser software into UK

Watch live and recorded Freeview and Freesat in any room and on the move

Leading European personal live and recorded TV experts [DVBLogic](#) today announces DVBLink 5.1 is now available in the UK. This enables users having a NAS (Network Attached Storage) device to stream live and recorded TV to any device in a home network or via mobile.

This new version is released on all supported DVBLink platforms - Windows, Raspberry PI or NAS, so the user has a complete system for the playback and recording of television - whether Freesat (DVB-S/S2) or FreeView (DVB-T/T2). Other broadcast standards, such as DVB-C and IPTV, are also supported.

DVBLink is also launching the TV Adviser guide which provides the most comprehensive EPG (Electronic Program Guide) data available - for two weeks in advance and far more detailed than is normally available for each channel; such as program name, description, genre and series information. The TV Adviser is a self-learning system, which provides the user recommendations, tuned to user's personal preferences. The system suggests similar programmes to those previously selected and has "likes" so it learns what kind of programs the user wants to watch and makes recommendations accordingly.

DVBLink product suite v5.1 key features

- Record your favourite TV programs in original quality directly to hard disk of NAS or PC
- Watch your live and recorded TV programs on your iOS and Android mobile devices
- Stream live and recorded TV throughout your house on DLNA devices such as TV's, PS3's etc.
- Get personalized TV program recommendations
- Watch live and recorded TV in XBMC and Windows Media Center
- Never miss your favourite programs again, browse the EPG and set recordings while on the go

DVBLogic provides the DVBLink 5.1 and TV Adviser software and can also provide the TV tuner device from its [website](#) (customers, who purchase tuner together with DVBLink software get discount on the bundle) or the user can buy this independently. The user will need a NAS or other supported device (the list of compatible platforms and NAS models can be found at DVBLogic's website). The TV Adviser software is available via subscription from the DVBLogic [website](#).

END

NOTES TO EDITORS

The prices are:

- DVBLink TVSource software on NAS and Linux platforms: 39 euro
- DVBLink TVSource + DVBLnk Connect Server bundle for Windows platform: 46 euro
