

## **NEWS ANNOUNCEMENT**

### **DVBLink v4.5: Recording and Playback of TV Channels at Home and On The Go – With or Without Windows Media Center**

*DVBLogic Introduces Advanced Recording Functionality and Offers Exciting, Connected PC TV Experience Outside Windows Media Center*

**Eindhoven, Netherlands, 2 July 2012**

#### **News Facts**

- DVBLink version 4.5 released as a free update.
- First version to also function independently from Windows Media Center.
- DVBLink Recorder featuring advanced recorder and timer options.
- Support for analog TV and Unicable.
- EPG Loader for epgData.com.
- New channel selection control for improved speed and convenience.

With the release of version 4.5 DVBLLogic now offers TV playback and streaming solutions for the home network and on the go for the first time independently from the Windows Media Center. Customers who don't have the Windows Media Center as part of their operating system or don't want to use it, can now watch TV programmes, schedule timer recordings and stream content via the DVBLLogic products solely. Optionally the Windows Media Center can still be used for recording and playback.

“With the uncertainty around the availability of Windows Media Center in Windows 8 this was the perfect timing to release our own recording client,” says Pavlo Barvinko, cofounder and CTO at DVBLLogic. “While we still believe the Windows Media Center provides the best playback experience, the DVBLLogic Recorder allows us to feature some nice extra recording opportunities. Moving forward the standalone recorder also allows us to offer DVBLLogic solutions for thin clients such as external storage devices or set top boxes running Linux.”

The DVBLink products seamlessly integrate TV and radio channels from various TV sources allowing to watch, record and stream Live TV and radio as well as recorded programmes to numerous mobile and home clients. The DVBLLogic recorder introduced in version 4.5 comes with advanced features such as scheduling a series of shows at once, timer conflict overview and functionality to manage recordings via the web interface or mobile clients

The new release also includes some fixes and improvements with regard to channel and EPG management and Unicable support. A new source product DVBLink AnalogTV now for the first time allows to integrate analog TV sources and manage recordings, LiveTV and streaming like for the other sources. EPG Loader for epgData.com released today allows the seamless integration of epgData.com's daily updated channel information for more than 160 channels across Europe.

## **Requirements, Price and Availability**

Source products in version 4.5 including DVBLink TVSource (for Satellite, Cable and Terrestrial TV tuner cards), DVBLink for IPTV (for TV and radio programs delivered from an ISP), DVBLink AnalogTV or DVBLink for Dreambox are available for 25 Euro each. DVBLink Connect! Server can be purchased together with any source product in a Connected Edition for 45 Euro or separately for 25 Euro – all prices are quoted inclusive VAT.

EPG Loader for epgData.com is available for 15 Euro and requires a premium subscription to the epgData.com service.

Free 20-days trials and paid versions are available for download at [www.dvblogic.com](http://www.dvblogic.com).

DVBLink apps for iPhone, iPad, Android and WinPhone can be downloaded in the respective stores and markets for free as an extension of the Connect! Server

## **Update Policy**

DVBLink v4.5 is a free update for v4 customers.

For v3 and v2 users the current paid upgrade rules apply as outlined here:

## **About DVBLogic**

DVBLogic was founded in 2007 to 'bridge the gap' between third party hardware and Windows Media Center. The company's mission is to enable consumers to view and listen to digital content anytime and anywhere. The DVBLink product line now streams digital content (TV – including HD, Satellite, Cable, Terrestrial and IPTV; Audio incorporating 5.1 Dolby Digital surround sound) to remote devices like laptops and PCs, mobile phones, gaming consoles or UPnP enabled media players for playback.

Since its foundation, DVBLogic has introduced products for use with many manufacturers, including Hauppauge; PCTV Systems; Technotrend; and Dreambox. DVBLogic is headquartered in Eindhoven, Netherlands. <http://www.dvblogic.com/>
